SURFACE PREPARATION FOR THE APPLICATION OF AESTHETIC COATINGS ON STAINLESS STEEL

SPECIFICATION: A2  ISSUE: 3  DATE: JULY 2019

1.0 SCOPE

The scope of this coating specification applies to operations required for the surface preparation of Stainless Steel.

Refer Design Standard, DS 95 (Standard for the Selection, Preparation, Application, Inspection, and Testing of Protective Coatings on Water Corporation Assets) for further information and/or clarification.

2.0 PURPOSE

The purpose of this coating specification is to prepare a Stainless Steel substrate for the application of an aesthetic coating.

3.0 DEFINITIONS

| Contractor: The service provider or its sub-contractor who will undertake the works. |
| Corporation: the Water Corporation and the Principal for the purposes of externally contracted asset delivery. |
| DFT: Dry Film Thickness. |
| ITP: The detailed Inspection and Test Plan(s) for the Works. |
| NACE: National Association of Corrosion Engineers. |
| NATA: National Association of Testing Authorities, Australia. |
| Superintendent: The Superintendent for the contract, as defined in the conditions of contract, who is appointed by the Water Corporation to manage/oversee the work under the contract on behalf of the Water Corporation. |
| TDFT: Total Dry Film Thickness. |
| Works: The surface preparation, coating application and inspection to be undertaken by the contractor to which this coating specification applies. |
SURFACE PREPARATION FOR THE APPLICATION OF AESTHETIC COATINGS ON STAINLESS STEEL

SPECIFICATION: A2  ISSUE: 3  DATE: JULY 2019

4.0 COATING APPLICATOR/PERSORNEL QUALIFICATION

4.1 Work shall only be carried out by competent personnel.

4.2 The work shall be undertaken by an approved Water Corporation Corrosion Control Panel Services member, unless approved otherwise by the Team Leader – Asset Durability.

4.3 The Applicator’s Coating Supervisor shall possess as a minimum one of the following certifications:

- ACA - Coating Inspector; or
- NACE - CIP Level I Coating Inspector.

4.4 The coating contractor shall nominate a Coating Inspector as their Quality Control Officer to carry out inspections, submit the ITP, undertake the required testing and maintain appropriate records for all work performed.

The Applicator’s Coating Inspector shall possess as a minimum one of the following certifications:

- ACA - Coating Inspector; or
- NACE - CIP Level I Coating Inspector.

5.0 ATMOSPHERIC CONDITIONS

5.1 Prior to and during surface preparation, the commander shall record details pertaining to environmental conditions including ambient and surface temperature, relative humidity and dew point.

6.0 SURFACE PREPARATION

6.1 Oil or grease shall be removed in accordance with AS/NZS 1627.1. Lightly sweep blast surface using garnet to create a surface profile of 30 - 40 microns, depending on the coating product requirement.

6.2 When using garnet for blast cleaning of stainless steel, only clean fresh garnet shall be used. Recycling of used garnet is not permitted. Only Australian GMA garnet or equivalent with allowable total chlorides of <10ppm shall be used. The contractor shall provide a test certificate from a NATA accredited laboratory tested in accordance with ISO 11126-10 confirming the chloride content of the garnet.

6.3 Metallic abrasive shall not be used under any circumstances.
6.4 Surfaces not required to be coated shall be protected with masking materials, which shall be completely removed by the Contractor after completion of the work.

6.5 Welding slag, weld spatter, sharp edges and any other surface irregularities, which may impair the appearance or performance of the coating shall be removed. Sharp edges shall be radiussed to a minimum of 2 mm.

6.6 The contractor shall maintain records and evidence of the blast surface and blast profile. These shall be made available to the Water Corporation and/or delegate at the completion of the project.

6.7 Stainless Steel shall be pickled and passivated prior to coating for aesthetic purposes.
7.0 INSPECTION

7.1 The contractor shall maintain records and evidence of the original surface, blast surface, and blast profile. These shall be made available to the Superintendent and/or delegate at the completion of the project.

7.2 Assessment of the surface profile height or anchor pattern of the abrasive blast cleaned surface shall be carried out using the Replica Tape method (TESTEX PRESS-O-FILM) as described in AS 3894.5.

7.3 The Contractor shall provide the Superintendent (or nominated delegate) adequate prior notice as to when and where the surface preparation and coating operations will be conducted to facilitate all specified inspections.

7.4 If recognised as a hold point in the ITP, the coating application shall not be carried out until the Superintendent has accepted the surface preparation.

8.0 CONTRACTOR'S RESPONSIBILITY

8.1 The Contractor shall supply all necessary plant, equipment, materials and labour, prepare the surface and apply and maintain the coating in accordance with this specification.

8.2 An Inspection Test Plan (ITP) shall be forwarded to the Water Corporation for review a minimum of ten working days prior to the commencement of work.

8.3 A list of all items to be inspected and the relevant drawing reference shall be forwarded to the Water Corporation Coating Inspector prior to the inspection being undertaken.

9.2 The preceding inspection clauses shall not relieve the Contractor of their responsibility to supply materials and perform work in accordance with the requirements of any overriding contract documentation.
