

Standard Signage for Treatment & Chemical Dosing Plants

CHLORINE BULK OR PACKAGE STORES

(Drums or Cylinders)

EVACUATION INFORMATION SIGN (DS WCSS310)

This **Emergency Information** sign is a square format with white text on a green background.

Material: Metal or vinyl – 450 (W) x 450 (H) with the other dimensions as indicated.

- The **Evacuation Information** sign is normally required when there is a project that has a significant number of persons engaged in construction activities within a plant site that stores and handles chlorine. This information is in addition to the standard site induction that provides non-operational personnel details of the actions required in the event of a chlorine leak.
- The **Evacuation Information** sign should be posted on a freestanding post, fence or wall near an appropriate entry/exit point(s).
- **Evacuation Information** sign should be displayed at a level so that it is visible from the normal direction of approach.
