

# Capital Investment Planning

## Project reschedule checklist

This is a checklist for requesting the reconsideration of the planned delivery date of Water Corporation Capital Investment Planning (CIP) projects.

The following points form the basis on which we assess and prioritise expenditure on capital growth projects.

A developer wishing to seek reconsideration of the planned delivery date of a CIP should address the following criteria:

1. Is the land zoned for the use?
2. Is the Structure Plan (local and/or district) endorsed by the Western Australian Planning Commission and/or local authority?
3. Does the proposal require any other statutory approvals? (environmental, main roads)
4. Can it be constructed now without the need for temporary components?
5. Does this development feature on the Urban Development Program, or other relevant planning level document?
6. What is the rate of development (actual and planned) within the catchment (supply zone of the works)?
7. What is the rate of development (actual and planned) within the adjoining catchment?
8. Is this development an incremental expansion of an existing scheme?
9. What is the status of other service agencies planning?
10. What is the landownership / certainty of success of the development?
11. What other constraints have been dealt with or require dealing with?

Please attach any supporting information that may assist us in assessing your request.
