

Camping capers

To understand how precious water is, consider the following problem: Your family of five is going on a five day camping trip to the Goldfields and packing 1000 litres of water.

How will you conserve this water?

How many 20 litre jerry cans of water does this represent?

How much water can be used per person per day?

What would you use the water for?

How much water can be used for each purpose: e.g. drinking, washing?

Write a report about how your family of five conserved water during the camping trip. Include what activities your family enjoyed each day.
