

# Water use monitoring card

How to use this card:

1. Read and record your meter at a similar time each day. Make sure to read the meter from left to right and record both the black and red numbers.
2. Calculate your water use by subtracting the previous meter reading from the current reading.
3. Please note any water using appliances that were used each day e.g. washing machines, hose used to top up pool, sprinkler on irrigation days.
4. Compare your daily water use. You may notice your water use is higher on your watering days or when you use specific appliances.

Day	Date	Time of meter reading	Meter reading	Water use (current reading minus previous reading)	Notes
