Pressure Management

As you may be aware, we're planning to undertake water pressure management in some parts of Cannington, East Cannington, Wilson, Maddington, Kenwick, Queens Park and Beckenham. This work is planned to take place from August 2021.

Pressure management will help future proof your water supply by reducing leaks and breaks and saving millions of litres of water each year. To see if you will be impacted, or to find out more information on pressure management, please visit:

watercorporation.com.au/pressure

What will my water pressure be?

The water pressure will vary depending on your location in the pipe network, contours in the land, and size of your water meter. However, all pressure managed areas will be designed to deliver a water pressure greater than our required minimum standard of 15 metres head (mH).

Will I notice much change in my water pressure?

We expect most customers will not notice a change in their water pressure. However, this depends on a number of factors, including your current water pressure, location of your house, and internal plumbing. We also use specialised equipment that will detect times of higher demand and ensure an increased volume of water is provided at the same pressure.

We want to hear from you if you have special or unusual water using devices, such as dialysis machines, reverse osmosis units, water demisters, large aquariums, or if you think you may already have low water pressure.

Will my appliances and irrigation work the same?

Most hot water systems and dishwashers are designed to work with pressures of 15-20 mH and correctly installed and maintained irrigation systems will work with pressures of 20-25 mH. The majority of our network will receive pressures greater than these requirements.

For more information, please visit our website or contact the manufacturer of your appliance to seek reassurance.

What do I do if I have a fire service?

We've identified and contacted customers with unusual water using devices such as fire hose reels, fire hydrants, fire sprinkler systems or other water firefighting systems. If you have a fire service and haven't heard from us, please contact the team on **9420 2985** or email pressure.management@watercorporation.com.au
