

Leak allowance application

Eligibility and criteria

Whilst the Water Corporation supplies water to the water meter, property owners are responsible for the cost of any water use registered on the water meter, as well as all water used or lost through the internal water service, and for maintaining the internal water service in good condition.

The leak that was repaired at your property may have had an effect on the water use recorded. If this is the case, we may consider granting a special allowance to offset a portion of the water wasted.

Application conditions:

- Leak allowances granted will cover only a portion of the total water use.
- Internal pipework repairs are undertaken by a licensed plumbing contractor.
- The Licensed Plumbing Contractor must hold a current license issued by the Plumbers Licensing Board. For more information visit commerce.wa.gov.au
 - Where the licenced plumbing contractor is the responsible person, their name and licence number must be detailed on the leak allowance application form.
 - Where a licenced tradesperson is working under the licenced plumbing contractor's general direction and control or supervision, the licenced tradesperson's name and licence number is not to be detailed on the leak allowance application form.
- The irrigation system must (as a minimum) have a WaterMark certified manual isolation valve, a backflow prevention valve complying with AS/NZS 35, and master control solenoid installed to meet irrigation industry standards. If there is no manual isolation valve and master solenoid installed, an allowance will be assessed upon re-application, only after the irrigation system is upgraded to the required plumbing standard and regulations and is certified as such by a licensed plumbing contractor. Waterwise garden irrigators (WGI) can verify the existence of these required items.
- WGI's must be a part of the Waterwise Garden Irrigator Program (WGIP). Visit www.watercorporation.com.au for a full list of participants.
- WGI's are not permitted to perform leak repairs or install manual isolation or backflow prevention devices on internal plumbing services.

PLEASE NOTE - *If you engage the services of a licensed plumbing contractor to check or make repairs to your internal service OR a WGI to check or make repairs to your irrigation, the Water Corporation will NOT reimburse you for the cost of this service.*

An allowance will not be considered:

- when the leak is visible or readily detectable
- for leaks and/or bursts that occur on internal or external taps; internal appliances, fixtures or fittings including dish washers, hot water systems, toilet cisterns and valves
- when the leak on the internal plumbing is not repaired (or verified) by a licensed plumber
- when the garden irrigation system does not as a minimum have a manual isolation valve and master solenoid installed
- for plumbing that is not compliant with government regulations
- for vacant or unattended premises that are not inspected and maintained regularly

Stop tap at water meter:

- is used by Water Corporation to temporarily stop the flow of water when carrying out routine repairs and maintenance. Customers may also use the stop tap to shut off the supply temporarily to carry out repairs to internal pipes and fittings.
- is not to be used for an extended period to shut off supply. If the stop tap fails, all water use remains the responsibility of the property owner. To shut off the supply for an extended period a manual isolation valve must be installed on the internal pipework for this purpose.

PRIVACY STATEMENT - *Information collected on this form will be used for the purposes directly related to the service you have requested. Your prior consent will be sought for any other proposed disclosure. Details of our Privacy Policy can be found on our website, www.watercorporation.com.au*
