

# Upcoming work near you

## What's happening?

We will soon drill a groundwater bore for investigation purposes using a recently constructed limestone pad as a foundation for the machinery. The investigative bore will be used to test the quality of the groundwater, as well as how much water we can get from the bore. The bore may eventually be used to supplement water from the proposed Alkimos Seawater Desalination Plant.

## Where is this happening?

Work will take place in a small area north of Graceful Boulevard within Water Corporation's Alkimos Water Precinct.

## When is this happening?

We expect the work to start from mid-January 2023. Our authorised contractors will arrive in the area from 6 am with construction work occurring between 7am and 7pm Monday to Saturday. It will take approximately seven weeks to complete the works.

## How will this work impact me?

You may notice increased activity around the site with workers coming and going. Noise will be kept to a minimum.

We will not clear any vegetation for these works. A small area of non-native grasses and weeds was cleared for the installation of the bore pad.

## How do I find out more?
